National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in National Register Bulletin, *How to Complete the National Register of Historic Places Registration Form*. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions.

1. Name of Property

Historic name: Holy Redeemer College

Other names/site number: _____

Name of related multiple property listing:

N/A

(Enter "N/A" if property is not part of a multiple property listing)

2. Location

Street & number: 3112 Seventh Street, NE

City or town: Washington State: DC County: N/A

Not For Publication: Vicinity:

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act, as amended,

I hereby certify that this ___ nomination ___ request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60.

In my opinion, the property ___ meets ___ does not meet the National Register Criteria. I recommend that this property be considered significant at the following level(s) of significance:

___national ___statewide ___local

Applicable National Register Criteria:

___A ___B ___C ___D

<p>_____ Signature of certifying official/Title:</p>	<p>_____ Date</p>
<p>_____ State or Federal agency/bureau or Tribal Government</p>

7. Description

Architectural Classification

(Enter categories from instructions.)

LATE 19TH AND 20TH CENTURY REVIVALS/ Italian Renaissance

Materials: (enter categories from instructions.)

Principal exterior materials of the property: Foundation: BRICK; Walls: STONE/Granite; Roof: ASPHALT; Other: STONE/Limestone, TERRA COTTA.

Narrative Description

(Describe the historic and current physical appearance and condition of the property. Describe contributing and noncontributing resources if applicable. Begin with a **summary paragraph** that briefly describes the general characteristics of the property, such as its location, type, style, method of construction, setting, size, and significant features. Indicate whether the property has historic integrity.)

Summary Paragraph

Holy Redeemer College is a late Romanesque Revival residential college constructed in 1933 for the Redemptorists, a Catholic religious order. The building is marked by its solid, masonry exterior, its central tower, and its setting upon an artificial rise, attributes that invoke the stateliness of a Medieval Italian *palazzo*. Though located within the Edgewood neighborhood of northeast Washington, DC, by association it may also be considered part of the Catholic University of America (CUA) and the adjacent neighborhood of Brookland. The college is located in square 3645, Lot 2. The three-story building is of brick construction with granite ashlar cladding and formed as a U with a main block along Seventh Street and north and south wings extending to the west, the north wing being slightly longer of the two. A tower centered on the front elevation rises one additional story to approximately 77 feet. A rear courtyard is bordered to the west by a one-story cloister, or covered walkway. A terra cotta band runs across the all elevations of the building just above the basement level windows, while a second band of terra cotta dentils is found across all elevations just below the windows of the third story. A flat, slag roof is concealed by a projecting, crenellated, terra cotta parapet that encircles the building, which is supported by a corbel table. The corners of the parapet have pyramidal, terra cotta caps.

Holy Redeemer College

Name of Property

Washington, DC

County and State

Unless otherwise noted, windows are double-hung, one-over-one, and vinyl-framed. Window openings have either round-arched or flat heads and typically have limestone sills and terra cotta crowns, with the exception of basement level window openings that have granite sills and no crowns. Except at the basement, window openings that have flat heads also have flat crowns with a carved ogee detail centered above the opening, while window openings that have round-arched heads also have round-arched crowns. Where there are banks of two or three adjacent windows, these windows share sills and crowns. Window openings at the basement and first stories are typically covered by iron bars.

To the rear of the main building is a contributing, one-story garage, also clad in granite ashlar. Both the college and garage retain high integrity.

Narrative Description

Site

The building is set within a large, partially-wooded lot at the intersection of Seventh and Jackson Streets, NE. The building sits on an earthen terrace that was created at the time of construction. A stepped concrete walk leads from the Seventh Street sidewalk to the front entrance. Two additional walks lead from in front of the main entrance around the sides of the building to secondary entrances on the north and south elevations. An additional walk leads northeast from in front of the north entrance to the Jackson Street sidewalk, with a second branch leading to an asphalt parking lot at the rear of the building. The parking lot is also accessible via asphalt driveways that extend from the north end of the lot northeast to Jackson Street and from the south side of the lot east to Seventh Street.

East (Primary) Elevation

The east elevation faces Seventh Street, NE. It is nine structural bays wide. The main entrance is located in the center bay, which projects outward from the remainder of the building. The entrance is accessible via a granite stair with two landings. On either side of the stair is a stepped, gray granite wall with limestone coping. The stair leads to a landing covered in terrazzo tile with a pink granite border. The multi-panel double door is made of wood. It is set in a terra cotta surround consisting of a round arch supported by two jambs with Corinthian columns. Above the door within the curve of the arch is a wood-framed fanlight. Below the door is a single limestone step. To the left and right of the door surround are narrow window openings covered by metal bars. These window openings have sloped limestone sills and terra cotta headers that are an extension of the door surround. The door and landing are surmounted by a limestone portico with a flat roof and a simple entablature, including one row of dentils. The portico is supported at the front by four ionic columns, two at each corner, resting on a low wall. At the rear, it is supported by a single engaged ionic column at each corner. A single, iron lamp hangs from the center of the portico roof above the landing. On top of the portico roof is a limestone balustrade with arched openings.

Holy Redeemer College

Name of Property

Washington, DC

County and State

In the center bay at the second and third stories are banks of three, flat-headed window openings with a shared terra cotta crown and limestone sill. On the fourth, tower story is a bank of three arched window openings separated terra cotta jambs in the form of Corinthian columns. The windows themselves are stained, leaded glass with a pattern of green, yellow, red, and blue diamonds. At the roofline of the tower is a battlement with a terra cotta cross mounted on a short plinth at the center.

The remainder of the bays on this elevation have two window openings on each floor. At the basement level, these window openings have flat heads and a shared granite sill. On the remaining three stories, window openings have a shared terra cotta crown and limestone sill. At the first and second story, the window heads and crowns are arched, while on the second story they are flat.

South Elevation

The south elevation is six structural bays wide. The two bays furthest to the right project slightly outward from the remaining four bays. In the second bay from the right is a secondary entrance. This entrance is located at the first story and is reached by a granite stair. Like at the stair to the main entrance, on either side is a stepped, gray granite wall with limestone coping. At the top of the stair is a landing. The double, paneled wood door is set in an arched surround and topped by a multi-light, wood-framed fanlight. Around the arch of the opening is a trim of terra cotta blocks. The entry is sheltered by a limestone portico with a flat roof and a simple entablature including one row of dentils. The portico is supported by four ionic limestone columns, two freestanding at the front and two engaged at the rear. On the underside of the portico roof is a contemporary fixture. On top of the portico roof is a limestone balustrade with arched openings. Above the portico at the second story is a single, flat-headed window opening. At the third story is a single, arched window opening.

In all other bays, window openings follow the pattern established on the east elevation of two windows on each floor. At the basement level, these windows have flat heads and a shared granite sill. On the remaining three stories, window openings have a shared terra cotta crown and limestone sill. At the first and second story, the window heads and crowns are arched, while on the second story they are flat.

North Elevation

The north elevation faces Jackson Street, NE and is eight structural bays wide. The first and second bays from the left mirror the bays directly opposite on the south elevation, including the secondary entrance with limestone portico in the second bay from the left. In the second through fourth bays from the left, there are paired windows at the basement level. At the first and second stories are double-height arched window openings set with stained glass windows. Though the stained-glass lights are primarily fixed, each window has one operable casement. The window openings are crowned with terra cotta block and have limestone sills. At the third story, these bays have the paired, arched window openings found elsewhere on the building. Between the second and third bays, the third and fourth bays, the fourth and fifth bays, and the fifth and sixth

Holy Redeemer College

Name of Property

Washington, DC

County and State

bays are granite buttresses that end at the line between the second and third stories. The buttresses have terra cotta caps. The seventh bay repeats the building's predominant window pattern with flat-headed window openings at the basement, arched window openings at the first and third stories, and flat-headed window openings at the second story. The eighth bay features a single window opening on each floor, again with flat-headed window openings at the basement and second story and arched window openings at the first and third stories.

West Elevation

The west elevation faces onto a courtyard that is bounded to the west by a one-story covered walkway that takes inspiration from a medieval cloister. It is seven structural bays wide. The center bay projects slightly outward and rises higher than those adjacent, to create a central tower that mirrors the taller tower on the east elevation. It has an entrance slightly above grade. The entrance is reached by a flight of three limestone steps terminating in a limestone landing. The door itself is multi-paneled wood, painted black, and is topped by a fanlight. Both door and fanlight are set in an arched surround with a terra cotta cap. The entrance and landing are covered by a limestone portico. The portico is supported by four ionic limestone columns, two freestanding at the front and two engaged at the rear. It has a simple entablature with a row of dentils. Because this bay houses the central stair on the interior, the windows are aligned with the stair landings rather than with the interior floors. At each landing is a bank of three flat-headed window openings.

The bays on either side of the central bay also project outward. They have a single window opening on each floor. On the left and right sides of the projection are banks of three window openings at each floor; however, these window openings are narrower than is found elsewhere on the building. The bays furthest to the left and right also have three window openings on each floor; however, these window openings are of the standard width for the building. At the southeast corner of the courtyard is a chimney clad in stone ashlar that rises above the roofline. The chimney has a corbelled, terra cotta cap with two arched openings on the east and west sides and three on the north and south.

The final west-facing bays are at the end of the two wings of the U. The bay furthest to the left has two window openings on each story, following the established pattern of the building. The bay furthest to the right is blind at the basement level. At the first-story it has an off-center, multi-panel, wood, double-door with three granite stairs and a flat, terra cotta crown. It has two window openings at the second and third stories. The cloister that forms the rear boundary of the courtyard runs from the right side of the left bay to in front of the right bay, terminating at the line of the south wall of the building with a single arched opening. It is one story in height with walls composed of repeating round archways. Below the roofline is a terra cotta corbel table.

Courtyard Elevations

In addition to the primary north and south elevations, there are north and south-facing elevations that front onto the rear courtyard. The south-facing elevation is six structural bays wide. In the bay furthest to the left, within the cloister and just above grade is an entrance reached by a

Holy Redeemer College

Name of Property

Washington, DC

County and State

single-granite stair. The multi-panel wood door is painted black and has a terra cotta header. In this bay, there are no window openings on the first story. The second and third stories have a single window opening on each story each with a limestone sill and terra cotta crown. The window opening at the second story has a flat head, while the window opening at the third story is a round arch. In the second bay from the left, at the basement level is a single flat-headed window opening with a granite sill. At the first story is a single window opening with an arched head, limestone sill, and terra cotta crown. At the second story is a pair of window openings with flat heads, a shared limestone sill, and shared terra cotta crown. At the third story is a pair of arched window openings with a shared limestone sill and a shared terra cotta crown.

In the remaining four bays, at the basement level is a pair of flat-headed windows with a shared granite sill. At the first and second stories are double-height arched window openings set with stained glass windows. Though the stained-glass lights are primarily fixed, each window has one operable casement. The window openings are crowned with terra cotta block and have limestone sills. These window openings have arched, terra cotta crowns. At the third story is a pair of arched window openings with a shared limestone sill and a shared terra cotta crown. Between the second and third bays, the third and fourth bays, the fourth and fifth bays, and the fifth and sixth bays are granite buttresses that end at the line between the second and third stories. The buttresses have terra cotta caps.

The north-facing courtyard elevation is five structural bays wide. The bay furthest to the left has a single window opening at each story, following the building's typical pattern of flat-headed window openings at the basement and second stories and round-arched window openings at the second and third stories. The second bay from the left also follows the pattern but has a single window at the basement and first stories and two windows at the second and third stories. The central bay, the widest on the elevation projects outward at the basement through second stories to create an extended refectory; the second story of the projection is a later addition of unknown date. At the basement level, the projection has three flat-headed window openings. At the first story, it has three round-arched window openings. On the left side of the projection, there are two window openings at the basement level and two window openings at the first story. On the right side, there is a single, off-center, round-arched door opening at the level of the first story that is reached by a cast-iron stair. The multi-panel door is topped by a fanlight, while the door opening has a terra cotta crown. Above the first story is a corbel table just below the roofline of the original projection. At the second story, the addition rests on top of the projection's roof. It is clad in gray granite to match the original building; however, the granite is regularly coursed. The addition has four aluminum-framed windows, one each on the left and right sides and two on the front. Above the windows is a simple wood cornice. The fourth and fifth bays from the left are a mirror of the first and second, except that the first story window in the fourth bay is shorter in height to accommodate the stair.

Garage

The garage is located behind the northwest corner of the college building. It is a one-story, two-car garage clad in irregularly-coursed granite ashlar to match the main building. The flat roof is concealed by a raised parapet that is crenellated on the primary elevation, which faces onto the

Holy Redeemer College

Name of Property

Washington, DC

County and State

parking lot. This elevation is dominated by two openings filled by contemporary garage doors. On the north elevation is a single, double-hung window concealed by a metal grate.

Interior

The interior of the College is divided into the main block and the north and south wings. Walls and ceilings throughout the interior are plaster except where otherwise noted.

Immediately inside the main entrance is a foyer. At the center of the foyer's tan terrazzo floor is an inlaid star of black, red, and brown marble. Around the perimeter of the room, the terrazzo is trimmed in the same red and black marble. The walls have red marble baseboards and gray marble wainscoting. A trim of lighter red marble is found around the top of the wainscoting, at the window sills, and surrounding the window and door openings. The walls above the wainscoting have plaster panel moldings that are painted gold. Plaster moldings are also found within the rectangular coffers of the ceiling. A brass chandelier hangs from the center ceiling. In the west wall, a double-leaf, paneled oak door with a single large light in each leaf leads to the corridor. Above this door is a five-light fixed transom. An additional, single-leaf, paneled oak door is found in the north wall and leads to a passage running parallel to the main corridor. Vestibules found inside the north and south entrances share several design details with the foyer including marble wainscoting, plaster panel moldings, and a plaster cornice. The vestibules have marble floors. They connect to the main hallway via double-leaf oak doors with six horizontal lights each, set in an oak surround with a five-light transom above.

The building is navigated via a main corridor on each floor. Originally, the corridor floors were covered in linoleum trimmed with terrazzo; today, they are carpeted. Corridor walls have red marble bases and wood dado strips. Beneath the dado strip is textured tan wallpaper. Doors are primarily single-leaf, paneled oak with three-light transoms above. Doors are recessed and the sides of the recession are also covered in paneled oak. Below the ceiling is an oak picture rail. The ceiling on the first through third floors is plaster with chrome-finish chandeliers at regular intervals on the first floor and rectangular florescent fixtures on the second and third floors. None of these lighting fixtures appear to be original to the building. At the basement level, the ceiling is dropped acoustic tile with inset fluorescent light fixtures.

Across the corridor from the main foyer is the main stair. The stair landings have terrazzo floors with marble base. The staircase has iron strings and riser and gray marble treads. The balustrade is white-painted cast iron with a quatrefoil motif topped by an oak railing. Additional oak railings are mounted to the plaster walls on the outside of the stairs. Above the stair railings is an oak dado strip. Doors and door surrounds are oak. Windows have tan marble sills. Secondary stairs are reached via doors at the west ends of the north and east wings. Secondary stairs have similar features as the main stair, but the iron balustrades have no quatrefoils and the stair treads are terrazzo rather than marble. At the bottom of each stair are doors to the exterior.

On the first floor, doors from the main corridor lead to several parlors and offices. On the second floor, they lead to private rooms originally occupied by students residing at the college. These rooms typically have oak chair rails, baseboards, and window surrounds. Floors are also

Holy Redeemer College

Name of Property

Washington, DC

County and State

oak. Restrooms are also accessed from the main corridor to the north and south of the main stair. Restrooms have white hexagonal tile floors, white subway tile wainscoting, and plaster walls. Restroom ceilings are non-original acoustic tile with fluorescent lighting fixtures. Stall doors are oak and fixtures are porcelain.

The basement floor in the north wing is occupied by a library. The library has a tan terrazzo and carpeted floor. The tiled ceiling has pendant light fixtures with glass schoolhouse shades. At the center of the room are two ionic columns. Two single-leaf doors in the east wall lead to the corridor, while two identical doors in the west wall lead to a smaller room that connects to the north stair.

The south wing first floor is occupied by the refectories and kitchen.¹ The main refectory has an oak floor and paneled oak wainscoting with beige patterned wallpaper above and an oak picture rail just below the tiled ceiling. Door surrounds are also oak. A double-leaf, paneled oak door with a single large light in each leaf in the west wall leads to a pantry. Above the door is a five-light, oak-framed transom. A second, identical door with matching transom leads from the pantry to the main kitchen. The kitchen and pantry both have ceramic-tiled floors (red in the pantry, white in the kitchen); in both cases, the tile is a replacement for earlier wood flooring. Both spaces also have white subway tile wainscoting. Door surrounds in the pantry and kitchen are ivory marble. Oak doors with three-light transoms in the north wall of the kitchen and refectory lead to an additional smaller refectory, also with a wood floor and oak wainscoting. A door in the west wall of the kitchen leads to the south wing stair.

The north wing first and second floors are occupied by a double-height chapel, which was extensively remodeled in March 1961. Originally, portions of the chapel floor were wood and the remainder was marble; however, the floors are now entirely pink marble with green marble trim. The floor at the west end of the room is slightly raised. The marble altar is located in front of this wall. Behind the altar is oak paneling with gold-painted details and a large, wooden crucifix at the center. To the left and right of the crucifix are paneled oak doors leading to the sacristy. In the east and west walls are four arched, stained glass windows with plaster surrounds. Underneath each window are air registers. The east and west walls also have beige marble wainscoting with red marble trim and baseboard. On the east wall at the rear of the chapel is a balcony that is accessed from the second-floor corridor by two paneled oak doors. The front of the balcony is faced in paneled oak. Above and below the balcony, the wall has plaster panel molding that is painted gold. The ceiling of the chapel has a plaster cornice and molded beams; the cornice has gold-painted details. The room is lit by recessed can lights in the ceiling.

At the end of the south wing on the second floor is a lounge area, labeled on original drawings as a lobby. This room has an oak floor and chair rail. The wood plank wainscoting below the chair rail is not original to the space. Door and window surrounds are oak. The dropped ceiling is acoustic tile with six non-original pendant light fixtures. A door in the west wall leads to the south wing stair. A door in the north wall leads into an addition above the smaller rectory on the first floor. This addition is believed to date to the 1970s and was previously a balcony. The floor

¹ A refectory is a room used for communal meals in a religious or educational institution.

Holy Redeemer College
Name of Property

Washington, DC
County and State

of the addition is beige linoleum and the walls are paneled from floor to ceiling in dark-stained wood of unknown variety.

Integrity

Holy Redeemer College retains excellent integrity. Still in its original location at the corner of Seventh and Jackson Streets, NE, the building's position on a manmade rise set back from the street remains unchanged. With the exception of the vinyl windows, the building retains the majority of its historic exterior materials including the granite cladding and limestone and terra cotta details. Historic features, such as the crowning terra cotta battlement, remain in place. The building also retains original entrances and fenestration patterns. The small addition to the dining room, though later construction, is within the building's rear courtyard and is not visible from public rights-of-way; therefore, its impact on the building's integrity is minimal. The building's interior has also seen relatively few changes over time, retaining the original floorplan and many of the historic finishes.

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- A. Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B. Property is associated with the lives of persons significant in our past.
- C. Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D. Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

(Mark "x" in all the boxes that apply.)

- A. Owned by a religious institution or used for religious purposes
- B. Removed from its original location
-

Holy Redeemer College
Name of Property

Statement of Significance Summary Paragraph (Provide a summary paragraph that includes level of significance, applicable criteria, justification for the period of significance, and any applicable criteria considerations.)

Holy Redeemer College was constructed in 1933 to the design of New York architect Anthony A. F. Schmitt to serve as housing for members of the Redemptorist religious order while they pursued studies at the nearby Catholic University of America. The period of significance extends to 1937, when the large, stained-glass windows were installed in the building's first-floor chapel. The building has been continuously owned and operated by the Redemptorists since its construction. It is significant under National Register Criterion A and corresponding DC Inventory of Historic Sites Criterion B as one of the many Catholic institutions that cumulatively made northeast Washington a center of Catholic life in the late nineteenth and early twentieth centuries. It is also significant under National Register Criterion C and corresponding DC Inventory of Historic Sites Criteria D and E in the area of architecture as an outstanding example of late Romanesque Revival architecture in the United States.

Narrative Statement of Significance (Provide at least **one** paragraph for each area of significance.)

Holy Redeemer College is significant under National Register Criterion A and corresponding DC Inventory of Historic Sites Criterion B in the categories of religion and education as an institution of twentieth-century Catholic education. The College was one of many Catholic educational and religious institutions in northeast Washington attracted by the presence of the Catholic University of America (CUA, established 1887). Cumulatively, these institutions gave rise to the area's nickname of "Little Rome" and established a thriving center of Catholic scholarship and life within Washington, DC.

The College is also significant under National Register Criterion C and corresponding DC Inventory of Historic Sites Criteria D and E in the area of architecture as an outstanding example of late Romanesque Revival architecture in the United States. Though the Romanesque Revival style declined in overall popularity after 1900, it continued to be utilized in some applications, particularly religious buildings, well into the twentieth century. Examples of later Romanesque Revival often took inspiration from the Romanesque architecture of Northern Italy, particularly Lombardy. Accordingly, the subtype is sometimes referred to as Lombardy Romanesque. Holy Redeemer College, built in 1933 to the design of A.F. Schmitt, is an archetypal example of this subtype identified by its heavy masonry, square central tower, round-arched window openings, classical-order columns, and corbel table.

Holy Redeemer College is not nominated under National Register Criterion D or corresponding DC Inventory of Historic Sites Criterion G as archeological potential is low. Prior to

Holy Redeemer College

Name of Property

Washington, DC

County and State

construction of Holy Redeemer College, the historic record does not indicate any development on the parcel. While the parcel was part of the Metropolis View estate of Washington Berry, an 1871 map indicates that estate improvements were located to the southeast of the current Holy Redeemer College site.² Although Metropolis View was later subdivided, historical maps do not indicate that the parcel was the site of any improvements prior to the construction of Holy Redeemer College. Additionally, the parcel is not known to have been located adjacent to any historic waterways, minimizing the potential for prehistoric archeological resources. Finally, the Holy Redeemer College building sits on an earthen terrace created at the time of construction, indicating significant disturbance of the ground.

Catholic University and "Little Rome"

The idea of a national Catholic university in the United States was first conceived in the mid-nineteenth century, a time when the Catholic population of the country was growing steadily due to immigration from Ireland and other Catholic areas of Europe. By 1860, there were three million Catholics in the United States. The establishment of a Catholic university was intended to strengthen American Catholicism by developing new leaders and knowledge. The university would combine the teaching of Catholicism with graduate studies and research. Leading the push for a Catholic university was John Lancaster Spalding, who in 1877 became the Bishop of Peoria, Ohio. Spalding convinced his friend Mary Gwendoline Caldwell to pledge \$300,000 for the establishment of the university. He also secured the support of Pope Leo XIII. Because of Spalding's efforts, in 1885 a committee was formed to develop and establish the university. In addition to Spalding, the committee members included Bishop John Ireland of St. Paul and Cardinal James Gibbons of Baltimore.³

The committee considered several locations for the university, but ultimately decided on Washington, DC. They chose to purchase the sixty-five-acre Middleton Estate at a cost of \$29,500.⁴ Middleton was located about three miles from downtown Washington, between the U.S. Military Asylum to the west and the Metropolitan Branch of the Baltimore and Ohio Railroad to the east. The proximity of the railroad provided connection to downtown Washington, while the remove from the city was thought to be healthful.⁵ Middleton had initially belonged to Samuel Harrison Smith, founder of the *National Intelligencer*, who called his estate Sidney. He and his wife Margaret Bayard Smith built a manor house on the property that became one of the CUA's earliest campus buildings. The land later belonged to James Middleton and his son Erasmus J. Middleton, who renamed it Middleton.⁶ The Catholic University of America (CUA) first opened for classes in the fall of 1888 and initially offered

courses in philosophy, English literature, scripture, and theology for religious students. Canon law was also soon added to the curriculum.⁷ The first building constructed for CUA, Divinity Hall (later Caldwell Hall), was a massive, Romanesque Revival building clad in uncoursed stone ashlar. It was completed in 1889.⁸

The neighborhoods around the new university were also developing. In 1868, Edgewood, to the south of CUA, had been subdivided under the name Metropolis View after an earlier estate at that location, which had belonged to Washington Berry.⁹ Early development in the Metropolis View subdivision clustered towards the south and was primarily rowhouses.¹⁰ The Brookland neighborhood to the west of CUA was subdivided in 1887 from land that was previously the farm of John and Anne Brooks. Brookland's high elevation and freestanding, single-family homes quickly made it popular. Moreover, though Brookland and Edgewood were already on the Metropolitan Branch, the arrival of the first electric streetcar line in 1889-1890 substantially increased development interest in the area.¹¹

Soon after its founding, CUA extended an invitation to Catholic religious congregations to establish houses of study at CUA or in the developing neighborhoods in the vicinity. One of the first orders to accept this invitation were the Paulists. CUA gave the Paulists the former Middleton manor house, which they renamed St. Thomas Aquinas College. Groups like the Paulists boosted the total number of persons affiliated with CUA, which experienced unexpectedly low growth in enrollment in its early years. By 1895, there were only 7 professors and 115 students. Nonetheless, CUA continued to construct new buildings on its campus. In 1895, McMahon Hall—another massive, Romanesque Revival building—was constructed on land donated by James McMahon to house a new school of philosophy.¹² In the late nineteenth century, to boost enrollment, CUA decided to admit lay students.¹³ In 1904, an undergraduate program was added, and in 1928, CUA opened to female graduate students. It would admit female undergraduate students after World War II.¹⁴

Meanwhile, between 1900 and 1940, more than fifty Catholic institutions followed the lead of the Paulists and rented or purchased property in the vicinity of CUA. The large number of Catholic institutions as well as the prevalence of people who could be seen in religious garb led to the neighborhood's nickname, "Little Rome." Another of the earliest orders to arrive were the Franciscans, who purchased a tract of land east of the university campus in 1890 and constructed a monastery that incorporated Byzantine and Romanesque influences. In 1901, the Marist

Brothers arrived and soon constructed a building north of the campus on Harewood Road. The Dominicans also established their House of Studies in 1901.¹⁵ In 1914, the Paulists relocated from the CUA campus to a new, Gothic Revival seminary on a large piece of land along Fourth Street, NE, formerly part of Washington Berry's Metropolis View estate and the later subdivision of the same name, which they named St. Paul's College.¹⁶ In addition to CUA, other Catholic universities were established, including Trinity College (now Trinity Washington University), a women's college founded in 1897 by the Sisters of Notre Dame de Namur, and Theological College, founded by the Society of St. Sulpice in 1917.¹⁷ With the establishment of these institutions and others, Northeast Washington truly became a center of Catholic life and education for the District of Columbia.

Romanesque, Romanesque Revival, and Lombardy Romanesque

Romanesque is a style of architecture that was popular in central and southern Europe between approximately the ninth through twelfth centuries. The name Romanesque derives from the inspiration that the style drew from ancient Roman architecture, including the pervasive use of arches and columns. Romanesque architecture is typically characterized by heavy masonry, thick walls, and rounded arches. Of buildings constructed in the Romanesque style, the greatest number are churches or other ecclesiastical buildings, such as monasteries. Although spread throughout Europe, Romanesque architecture varied significantly by country and by region. In the northern Italian kingdom of Lombardy, Romanesque buildings were particularly bulky in appearance and were heavily influenced by the Romanesque buildings of Germany and France, while further to the south, the cities of the Duchy of Tuscany created more individualized interpretations. In Lombardy, a prosperous agricultural center during this period, the Romanesque was informed by the expansion of Benedictine monasticism and the position of Lombardy within the Holy Roman Empire, of which it was then a part.¹⁸ In keeping with the Holy Roman Empire's Germanic origins, Lombardy Romanesque was closer in character to Saxon and Rhenish Romanesque buildings than elsewhere in Italy, and was characterized by square towers, rib vaulting, and arched colonnades below the eaves.¹⁹

Romanesque architecture was replaced in fashion by the Gothic style beginning around the twelfth century. However, beginning in the mid-nineteenth century, an interest in the Romanesque style resurged. The new Romanesque was first popularized in Germany, where it was known as *Rundbogenstil*, or round-arch style. It was soon exported to the United States. In addition to round arches, the first wave of Romanesque Revival was characterized by heavy stone or brick construction, round towers, and squat columns. Relatively few buildings in the

United States were built in the style until it was embraced by architect Henry Hobson Richardson (1838-1886) beginning in the 1870s.²⁰ Richardson's particular interpretation of the Romanesque is often referred to as Richardsonian Romanesque. Among his most famous works of Romanesque Revival are Trinity Church in Boston (1872) and the John J. Glessner House in Chicago (1887). Neither Richardson's designs nor those of the architects he inspired were entirely true to the original Romanesque style. Richardson incorporated details like polychromatic masonry, borrowed from the Gothic style, and Syrian arches, common in early Christian buildings. His imitators were commonly influenced by the Queen Anne style and incorporated asymmetrical facades, turrets, and complex roofs.²¹

Although Romanesque Revival declined in overall popularity in the United States after 1900, architects continued to be inspired by the Romanesque in the design of select buildings. The late Romanesque Revival style, or Lombardy Romanesque, was most prevalent between 1922 and 1940. In contrast to earlier Romanesque Revival buildings, Lombardy Romanesque Revival buildings are truer in appearance to their medieval forebears. They show little of the Queen Anne influence that often colored earlier Romanesque Revival structures, and they usually incorporate square towers with flat or pyramidal roofs rather than round towers with conical roofs. The Lombardy Romanesque Revival is defined by the repetition of round arches for window and door openings, corbel tables or miniature arches below the eaves, and prominent belt courses that demark the horizontal lines of the building. The exteriors of Lombardy Romanesque buildings are usually clad in brick, stucco, or stone. Ecclesiastical buildings often have prominent bell towers.²²

One of the most well-known examples of Lombardy Romanesque in the United States is the campus of the University of California at Los Angeles (UCLA). The campus's four original buildings—Royce Hall, Powell Library, the Humanities Building, and Haines Hall—were designed in the 1920s under the supervision of master planner George W. Kelham.²³ The style of the buildings was deliberately chosen for the Mediterranean climate of Southern California, where the Collegiate Gothic styles popular elsewhere in the country at that time would have seemed out of place.²⁴ Elsewhere, the style was predominantly used for ecclesiastical buildings. One such example is St. Anthony's Roman Catholic Church in Wilmington, Delaware, constructed in 1925 and listed on the National Register of Historic Places in 1984. Other examples include St. John's Roman Catholic Church in Cambridge, Massachusetts (1905);

Congregation Agudath Sholom (the Walnut Street Synagogue) in Chelsea, Massachusetts (1909); Saint Mary of the Lake in Chicago, Illinois (1913-1917); and St. Luke's Church in Saint Paul, Minnesota (1924).²⁵ Lombardy Romanesque Revival buildings in the District of Columbia include Ward Hall at CUA (1930) and St. Anthony's Roman Catholic Church at Twelfth and Monroe Streets, NE (1939).

The Redemptorists and Holy Redeemer College

The Congregation of the Most Holy Redeemer, commonly referred to as the Redemptorists or the Redemptorist Fathers, is a Catholic religious order established in the mid-18th century in southern Italy by St. Alphonsus Liguri. The order has traditionally dedicated itself to missionary work. The first Redemptorists in the United States arrived in 1832 from Vienna, answering a call for Catholic priests put out by the ten Catholic dioceses then in existence.²⁶ These Redemptorists worked with Native Americans and with Irish, German, and Slavic immigrant groups. In 1850, they established the first American Redemptorist ecclesiastical province at Baltimore.²⁷

Though the Redemptorists gradually spread to other areas of the United States, it was not until 1928 that leadership first discussed establishing a presence in Washington for purposes of facilitating the pursuit of graduate studies by Redemptorist fathers. Individual Redemptorists had previously undertaken studies at CUA and Georgetown, but had done so without a Redemptorist facility nearby. The Baltimore Provincial (head of the Redemptorist Baltimore Province), Father James Barron, proposed to rent a house near CUA beginning in 1930 for a limited number of Redemptorists as a trial run for a more permanent situation. After arranging with CUA for the enrollment of Redemptorist fathers, Barron secured a house at 3512 Ninth Street, NE. The house had sufficient bedrooms for six residents. It was formally named Holy Redeemer College at the suggestion of Father Cornelius Warren in 1933.²⁸

In May 1930, Father Barron was replaced as the Baltimore Provincial by Father Andrew Kuhn. At that time, Barron became the first superior of Holy Redeemer College, a post that he would hold until 1936. Deeming the Washington experiment successful, Barron and Kuhn consulted about obtaining a more permanent site for the College. They viewed several properties before deciding to purchase four acres from the Paulist Fathers in 1932. The property, part of the land belonging to St. Paul's College, was located on Seventh Street between Jackson and Hamlin Streets.²⁹ The purchase price was \$35,000.³⁰ Prior to construction, the Park and Planning

Commission and the Commissioners of the District of Columbia agreed to permanently close the portion of Irving Street northeast between Seventh and Fourth Streets that ran through the site.³¹

Barron hired Anthony A. F. Schmitt of New York to design the new building.³² Schmitt had previously designed for the Redemptorists, including the Beaux-Arts school at the Immaculate Conception of the Blessed Virgin Mary Church at East 151 Street and Melrose Avenue in the Bronx (constructed 1901).³³ Schmitt also designed other Catholic buildings, including the Romanesque St. Luke's Catholic Church at 622 E. 138th Street, likewise in the Bronx (constructed 1915-1918).³⁴ Schmitt's design for Holy Redeemer College was quite similar in appearance to the Redemptorist seminary of Mount St. Alphonsus in Esopus, New York, designed by architect Franz Joseph Untersee. Mount St. Alphonsus, constructed between 1904 and 1907, was the seminary of the Redemptorists. Like Holy Redeemer College, it was Romanesque Revival, brick construction with granite ashlar cladding, had a central tower over the main entrance, and incorporated a mix of round-arched and flat-headed window openings. Mount St. Alphonsus also offered similar facilities to Holy Redeemer College, including a chapel and library.³⁵

In September 1932, the Redemptorists hired Parkhill Construction Company, who began excavation at the site by the end of that month. Though Schmitt had intended to use Port Deposit granite from Maryland, Parkhill favored Stone Mountain granite from Georgia for its durability.³⁶ Schmitt filed the building permit for a “community house” for the Redemptorists on September 28, 1932. The permit described the building as having fireproof construction, incorporating over one million bricks covered by ashlar. The estimated cost of the building was \$250,000. In October 1932, Schmitt wrote to the inspector of buildings to request that they be allowed to omit the skylights above the two rear staircases that were included in the plans; this request was granted.³⁷

The cornerstone of the building was laid by Father Kuhn on January 9, 1933. The cornerstone contained a short history of the Redemptorists, a list of priests who had lived at the house at 3512 Ninth Street, a picture of that house, and several coins. Despite early delays in construction due to bad weather, the building was completed by August 1, 1933. The first fathers occupied the building in September, and the cost of the building was paid for in full by December 31, 1933. The building was formally blessed on January 14, 1934 by Auxiliary Bishop John M. McNamara

of Baltimore, less than week after the death of Schmitt on January 8.³⁸ Shortly after opening, the college, which had a capacity of seventy residents, was occupied by twenty-seven students pursuing graduate studies at CUA.³⁹ In addition to individual rooms for these residents, the building offered more than one chapel, an extensive library, kitchen and dining facilities, and several parlors. In 1937, the first-floor chapel received eight stained-glass windows designed by Franz Meyer Studios of Munich, Germany. Between 1934 and 1944, forty Redemptorists received graduate degrees in the arts and sciences from Catholic University, including degrees in German, French, English, Sociology, Church History, and Canon Law.⁴⁰

In March 1961, the house chapel was renovated. It would undergo further renovations after the Second Vatican Council, which concluded in 1965, developed new requirements for the positioning of altars.⁴¹ In 1964, a portion of the Redemptorist property totaling 55,000 square feet at the corner of Seventh and Hamlin Streets was sold to the Augustinians. The Augustinians resold the property in 1967, and the land was developed as apartments.⁴² The remaining

Verbal Boundary Description (Describe the boundaries of the property.)

The boundaries of the property include the entirety of Assessment and Taxation Lots 828 and 829 in Square 3645. The eastern and northern boundaries of the property correspond entirely to the eastern and northern boundaries of Lot 828. The western and southern boundaries of the property are formed by a continuation of the western and southern boundaries of Lot 828 from their northern and eastern termini to the point where they intersect each other.

For a visual exhibit, please see section 9, page 29.

Boundary Justification (Explain why the boundaries were selected.)

Lots 828 and 829 were chosen as the boundaries of the landmark because it includes all the contributing historic features of the property, including the entirety of the 1933 college building and the contributing garage as well as a significant portion of the grounds that define the building's setting. Although current Lot 1 and Lots 805-827 were also associated with the building during its period of significance, these lots are no longer controlled by the Redemptorists. Lot 1 has been under separate ownership since 1965 and was developed as an unrelated apartment complex in 1967. Lots 805-827 are controlled by the homeowners' association that will govern the residences to be constructed on those lots.
